JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 168 1951

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys : In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order ; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron when present, are included in the title ; iron when present is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples : "Iron–silicon–carbon alloys" and "iron–chromium–nickel–carbon alloys."]

Abrasives, for cleaning-belts, 320 ; metallic, for shot blasting, 428 ; steel pellets, 428 ; for tumbler-finishing, 203

Absorptiometric Analysis, determination of phosphorus in coal and coke ash, 228 ; variable-aperture photoelectric device, 442

Acme Shear Co., nodular-iron castings, 220

Ageing, hydrogen removal, 437 ; mechanical, 328 ; precipitation, 333 ; in slip, 210

Air, requirements in steelmaking, 89

Aircraft Parts, brake-drum materials, 312 ; engine fracture, 213 ; corrosion by fungi in transit, 335 ; landing-gear forgings, 99 ; landing-gear welding, 102

Aircraft Steel, at low temperatures, 219 ; for turbines, 329 ; welding, 427

Algoma Steel Corp., split-wind blast-furnace practice, 309

Allen (W. H.), Sons and Co., Ltd., welded power plant, 427

Alloy Identification, spot tests, 444

Alloy Steel, analysis by spectrography, 113 ; austempering and quenching, 210 ; austenite transformation, 439 ; for automobiles, 215 ; continuously cast, 331 ; determination of phosphorus by colorimetry, 114 ; developments, 331 ; effect of boron on austenite transformation, 332 ; elements addition, 218 ; hardenability tests, 327 ; for high-duty castings, 222 ; high-strength, 220 ; high-temperature steam-turbine, 329 ; niobium substitution for titanium, 437 ; for oil-well plant, 221 ; production by Clyde Alloy Steel Co., Ltd., 309 ; production and properties, 229 ; structural, 331 ; structural, brittleness, 435 ; temper-brittleness detection by microscopy, 223 ; welding, 102 ; wire drawing, 316 ; work hardening, 437

Alloys, aluminium–copper, 110 ; cadmium–tin, electrodeposition, 432 ; chromium–cobalt sigma phase, 226 ; chromium–copper, as welding electrodes, 104 ; chromium–nickel, oxidation in grinding, 105 ; iron–aluminium–chromium, life testing for resistors, 108 ; iron–aluminium–nickel microscopical studies, 233 (*Paper*) ; iron–carbon, error in equilibrium system, 440 ; iron–carbon, magnetic analysis, 141 (*Paper*) ; iron–carbon metastability, 224 ; iron–carbon, phase changes on tempering, 141 (*Paper*) ; iron–carbon, structure and thermodynamics, 440 ; iron–chromium, isothermal transformations of inclusions, 110 ; iron–chromium, magnetic transformation, 441 ; iron–chromium sigma phase, 226 ; iron–chromium–molybdenum system, 110 ; iron–gold, hardening, 216 ; iron–nickel transformations, 225 ; iron–silicon, metallography of carbon in, 440 ; iron–silicon–carbon carbide phase, 226 ; iron–silicon–carbon, structure control, 439 ; iron–

Alloys—*continued*
zirconium, 110 ; lead–thallium electrodeposition, 432 ; tin–zinc electrodeposition, 430

Aluminium, coating processes, 206, 207 ; in cold-extruded non-ageing steels, 193 ; determination in high-purity iron, 383 ; determination of trace amounts in iron, 428 ; dissolution of cast iron by, 112 ; effect of deoxidation with on hot-tearing, 391 ; hot-dip coating on steel, 206 ; spraying on steel, 207, 432

Aluminium Alloys, bonding to steel, 207

Aluminium Bronzes, analogies with steel, 110

Aluminium–Copper Alloys, thermal-diagram comparisons with steel, 101

Niobium, substitution of titanium for in steels, 437
Nitriding, furnaces, 315 ; gas and bath, comparison, 315 ; martensitic stainless, 100 ; nitrogen and oxygen absorption, 315
Nitrogen, absorption in nitriding, 315 ; determination in steel and cast iron, 227 ; effect on impact strength, 210 ; effect in steel, 330 ; in iron and steel, 227 ; solubility in iron alloys, 220
Nodular Cast Iron, crystallization, 95 ; determination of magnesium in, 445 ; electron-microscope study of spherules, 223 ; graphite grain-size, 439 ; growth, 109 ; heavy castings, 220 ; light castings, 220 ; Ni-Resist, 109 ; nodulizing-alloy experiments, 420 ; production, 190 ; production and properties, 109, 438 ; production in U.S.A., 420 ; properties, 331 ; reports on experiences with, 220 ; research in Belgium, 332 ; section-size relationships, 312 ; structure and properties, 438 ; theory and practice, 190
Non-Destructive Testing, of castings, 217 ; developments, 436 ; magnetic and electrical methods, 216 ; radiographical methods, 218 ; by radon radiography, 217 ; by supersonics, 217
Non-Metallic Inclusions, in deoxidized malleable irons, 95 ; effect on hot workability of steel, 374 (*Paper*) ; in forged and cast acid open-hearth steels, 419
Normalizing, salt-bath, 321
Northrop Aircraft Inc., permanent moulds, 191
Norway, electric pig-iron production, 416
Nucleation, in solid solutions, 438
Nuts, mass-production, 193 ; production in France, 424

Obituary Notices, 183, 409
Oil, recovery from coke-oven gas, 306
Oil Tanks, welding on site, 105
Open-Hearth Furnace, air and waste-gas flows, 417 ; all-basic in Europe and America, 309 ; automatic controls, 92 ; bath pyrometers, 309 ; bath-temperature measurement, 87 ; bath-temperature measurement by blowing-tube pyrometers, 87 ; bath-temperature measurement and control by Pt/Pt-Rh couples, 414 ; bottom refractories, 308 , charge-oxide specifications, 188 ; charging-rate improvement, 92 ; checker-brick wear, 308 ; cold-metal charging, 91, 92 ; firing with enriched blast-furnace gas, 87 ; flow-pattern determinations before firing, 400 ; Friedrich and Hoesch, working data, 188 ; frontless design, 188 ; fuel-flow metering-pump trial, 46 (*Paper*) ; instrumentation in U.S.A., 86 ; Maerz, working data, 188 ; oxygen injection, 417 ; oxygen injection in basic, 417 ; oxygen injection through back wall, 310 ; port construction with quartzite, 88 ; roof temperatures, 307 ; silica-roof life, 308 ; silica-roof wear, 308 ; statistical analysis of factors affecting output, 188 ; stud-welded doors, 188, 418 ; thermal analysis, 189 ; very large, economics with, 418
Open-Hearth Models, fuel-gas flow studies, 417 ; gaseous mixing in semi-venturi designs, 92 ; pressure and flow in venturi type, 417 ; review of flow-pattern studies in Britain, 417
Open-Hearth Process, basic, applications of ionic slag/metal equilibria theory, 91 ; cold-metal practice, 91 ; control limitations, 418 ; controls in France, 417 ; effect of melting conditions on steel hardenability, 92 ; melting-shop management, 90 ; phosphorus-removal reactions, 418 ; scrap preparation, 92 ; statistical analysis of data, 418
Open-Hearth Slag, analysis, 115 ; basic, bagging for fertilizer, 317 ; basic, mineralogical investigations, 418 ; basicity determination by pancake sampling, 91, 418 ; manganese recovery, 311 ; reactions in phosphorus removal, 418
Ores, mining and treatment, 85, 185, 305, 411 ; shipment plant, 317
Osmond (Floris), influence on steel metallurgy, 115
Österreichische - Alpinen - Montangesellschaft, twin blast-furnace-stove practice, 308
Oxidation, Armco-iron nuclei, 441 ; chromium–nickel alloy in grinding, 105 ; film reaction on iron, 442 ; heat-resisting metals, 328 ; in presence of MoO_3, 328 ; steel during tapping, 310 ; theory applicable to steelmaking, 189
Oxides, thermodynamics of compounds, 91
Oxy-Acetylene Flames, in surface hardening, 104 ; in steel fabricating industry, 202
Oxygen, absorption in nitriding, 315 ; admixture with CO in final stage of basic Bessemer process, 337 (*Paper*) ; admixture with steam in Bessemer process, 417 ; in basic open-hearth, 417 ; determination in liquid steel by nephelometry, 114 ; distribution in ironmelting in electric furnace, 93 ; effect on impact strength, 210 ; effect in iron castings, 420 ; effect in steel, 330 ; in electric furnace, 93 ; flow-metering, 117 ; injection effects in open-hearth, 417 ; injection through open-hearth back wall, 310 ; pure, in side-blown converter, 417
Oxygen-Enriched Air, in acid converters in Argentina, 309 ; in basic converter, 309 ; in basic converter for production of low-nitrogen steel, 309 ; in Bessemer process, 417 ; cupola working data, 311
Oxygen Lancing, in electric stainless-steel production, 189 ; in carbon-steel production in arc furnace, 419 ; in open-hearth, 417

Page-Hersey Tubes, Ltd., welding in pipe-making, 318
Painting, preparation for, 430 ; effect of surface preparation in sea-water corrosion, 106 ; protection of steel by, 165
Paints, assessment of adhesion to steel, 358 (*Paper*) ; butyl titanate heat-resisting, 323 ; corrosion-inhibitive, effects of pigments, 334 ; drying by infra-red, 208 ; electrochemical behaviour in sea water, 441 ; electrodeposited bases, 432 ; film defects, 447 (*Book*) ; mica-base, 323, 324 ; protective, testing, 432 ; rubber derivatives in, 206 ; Zincalite, 324
Park Gate Iron and Steel Co., blast-furnace charging equipment, 416
Parker Rust Proof Co., wire-drawing coatings, 429
Parsons and Marine Engineering Turbine Research and Development Association, 117
Parsons Tool Inc., milling hardened steel, 428
Partridge Jones and John Paton, Ltd., centralized lubrication for rolling mills, 199
Patternmaking, investment materials, 96 ; in lost-wax process, 422 ; large-pattern construction, 314 ; metal patterns by clay/plaster method, 191 ; methods and costs, 314 ; pattern storage, 421 ; use of plaster, 96
Pearlite, lamellar, electron-microscope study, 222
Periodic System, 117
Permanent-Magnet Alloys, characteristics, 217 ; developments, 217 ; for electrical instruments, 216 ; structure, 108
Permanent Magnets, properties, 435
Perrin Process, 92
Personnel, apprentice training, 118 ; dermatitis in steelworks, 335 ; incentives, 446 ; management, 117 ; manual-labour rationalization, 230 ; physiological studies, 446 ; safety, 117
Peru, electrometallurgy plan, 446
Phase-Contrast Microscope, 223
Philadelphia Electrical Co., graphitization in pipes, 329
Phosphate Coatings, 118 (*Book*), 120 (*Book*) ; Bonderizing plant, 206 ; Bonderizing process, 206 ; lubricant, 199 ; steel window frames, 207 ; in wire drawing, 429
Phosphorus, determination in cast iron, steel, and alloys, 228 ; determination in coal and coke ash by absorptiometry, 228 ; determination in high-purity iron, 382 ; determination in low-alloy steels, 114 ; determination by spectrographic quantometer, 113, 114 ; determination in steel by spectrography, 227 ; effect on weldability, 199 ; removal in open-hearth process, 418 ; segregation in steel, 326
Photoelastic Analysis, in determination of tensile test-piece shape, 433 ; equipment improvement, 434 ; oblique-incidence techniques, 212 ; polariscope, 212 ; stresses in perforated beam, 434 ; welds, 427
Physics, report on progress, 448 (*Book*)
Pickling, 106, 203, 320, 428 ; continuous-cascade, 429 ; hydrogen embrittlement in, 321 ; hydrogen embrittlement of stainless steels, 221 ; inhibition by ureas, 320 ; inhibitor mechanisms, 320 ; inhibitors, 106 ; inhibitors, effect on hydrogen embrittlement, 321 ; mechanism, 320 ; plant maintenance, 429
Pickling Liquor, disposal, 430 ; waste, concentration of free acid, 203 ; waste, $FeSO_4$–H_2SO_4–H_2O solubilities, 106
Pickling Tanks, design and construction, 320
Pig Iron, blowing with Bessemer slag, 91 ; determination of magnesium in, 443 ; effect of blast-furnace operation on quality, 187 ; metallurgical basis of production in Austria, 343 (*Paper*) ; production, 89, 186, 308, 416 ; production in electric furnace, 416 ; production history in Alabama, 445 ; production in Humboldt low-shaft furnace, 89, 309
Pipelines, welding, 318 ; welding by Unionmelt process, 317
Pipes, centrifugal-casting machine, 314 ; corrosion inhibition by sodium silicate, 442 ; flow formulae, 117 ; graphitization, 329 ; steam, tests, 329 ; for superheated steam, 329 ; welded production, 318
Piston Rings, centrifugally cast sleeves, 191 ; manufacture, 191 ; pressure welding, 319
Pittsburgh Commercial Heat Treating Co., equipment, 193
Plasticity, in rupture, 211 ; stress/strain relations, 325
Plastics, as protective coatings, 432
Pneumoconiosis, social consequences of among South Wales coal miners, 230 (*Book*)

mination of nitrogen in, 227; determination of oxygen by nepholometry, 114; determination of phosphorus in, 228; determination of phosphorus by quantometer, 113, 114; determination of phosphorus by spectrography, 227; determination of sulphur in, 227; determination of vanadium by photometry, 444; developments, 331; die, 109, 424; die-block, 424; die, heat-treatment, 192; effects of elements on impact strength, 210; effects of elements on properties, 330; effects of melting conditions on hardenability, 92; effects of molybdenum, 330; effects of non-metallic inclusions on hot workability, 374 (*Paper*); effects of phosphorus and sulphur on weldability, 199; effects of shot peening on bend properties, 210; effects of stresses on linear expansion, 329; effects of work hardening, 435; electric. *See* Electric Steel; electrolytic impregnation with silicon, 207; engineering, 331; engineering, stress testing, 326; fabrication development in Austria, 369; flakes, 423; flaking, 437; flaking origins, 437; flow-pressing, 101; fluidity in foundry moulds, 422; forged, inclusions distribution, 93; friction sawing, 106; galvanized, corrosion protection, 111; gas-turbine, 329; graphitization below critical temperature, 220; hardenability, 107, 215; hardenability, effect of melting conditions, 92; hardenability testing, 327; hardened, milling, 428; hardened, testing, 107; hardening, 192; hardness variations on tempering, 107; heat-resistant. *See* Heat-Resisting Steel; heat-treatment, 192; heat-treatment equipment, 192; heat-treatment **S** curves, 423; high-speed. *See* High-Speed Steel; high-strength, 220; hot strength in relation to structure, 219; hot-tearing, 384 (*Paper*); hot-tearing, effect of deoxidation by aluminium, 391; hydrogen diffusion and solubility, 330; hydrogen embrittlement in pickling, 321; hydrogen embrittlement in plating, 322; hydrogen segregation, 330; inclusions. *See* Inclusions; induction heating, 315; Invar dimensional behaviour, 108; killed, susceptibility to hot-tearing, 394; lattice parameters, 110; lead-covered, welding, 319; machining by electric-spark method, 203; magnet, 217; metallurgical basis of production in Austria, 343 (*Paper*); nitriding effects, 315; non-ageing, 328; non-ageing, cold extrusion, 193; non-metallic inclusions. *See* Non-Metallic Inclusions; oxidation during tapping, 310; paint-adhesion assessment, 358 (*Paper*); phosphorus segregation, 326; pickling inhibitors, 106; pickling and pickling-inhibitor mechanisms, 320; plastic deformation, 209; powdered, use as pigment and in concrete, 324; precipitation processes, 327; pressure-vessel, effect of welding, 318; pressure-vessel, specifications, 108; production, 90, 187, 309, 416; production data, 116; production and markets in Europe, 335; production at Stewarts and Lloyds, Ltd., 90; properties at low temperatures, 437; properties as rolled, 435; protection by metallic coatings, 171; quality control, 418; quality in relation to test-bar fractures, 95; quenching curves, 316; resistance to HCl, 329; rimmed and capped, 331; SAE 1020, hydrogen embrittlement, 437; semi-killed, susceptibility to hot tearing, 394; sheet. *See* Sheet Steel; sintered-manganese, 433; special. *See* Special Steels; specification by hardenability, 215; specification problems, 93; stainless. *See* Stainless Steel; strength in relation to carbon and manganese contents, 108; stress-corrosion cracking, 112; structural. *See* Structural Steel; super-machining, 220; surface-quality improvement, 90; Swedish exports, 446; tempering, 316; tool. *See* Tool Steel; transformation behaviour, 225; transformation kinetics, 225; transformer. *See* Transformer Steel; utilization information, 118; vanadium non-ageing, 328; vanadium, transformation behaviour, 225; vanadium-treated deep-drawing, 310; weldability, 200; weldability testing, 200, 212; world production, 115; yield point and ageing, 210

Steel Bars, annealing-furnace effects, 100; annealing and heat-treatment, 99; casting by Soro process, 97; cold-finished, 101; etching of plastically deformed layers and measurement of length changes, 23; evaluation of macroscopic residual stresses, 15 (*Paper*); production, 195; reeling and shearing machines, 197; rolling-defect elimination, 316; stress reduction, 424

Steel Blooms, gas machine for hot-cropping 401 (*Paper*); shears for, 196

Steel Castings, adherence of moulding sand, 190; chemical reactions with mould interface, 313; deseaming, 105; developments, 421; developments in Britain, 421; heat-treatment, 422; high-duty, 222; inclusions removal and welding of flaws, 105; production methods, 312; test-pieces, 325; valves and fittings, 190

Steel Company of Wales, Ltd., history, 446; protection of stored plant against corrosion, 112

Steel Foundry, 190; flame cutting, 202; for naval castings, 421

Steel Industry, in Nassau and Siegerland, 411; pioneers, 335; in Yugoslavia, 185

Steel, Peech and Tozer, Ltd., diesel-eletcric locomotives, 426

Steel Plates, boiler, analysis without destructive sampling, 113; boiler, testing by supersonics, 328; effect of incidental elements, 220

Steel Powders, 231 (*Book*); as metallic pigment in cement mix, 324

Steel Products, distortion control in hardening, 316; flakes, 423; standardization, 115; standards in France, 436

Steel Strip, surface preparation for plating, 320

Steel Tubes, compression-formed, 100; production by acid Bessemer process, 90; seamless production at Clydesdale Works, 90; for superheated steam, 329

Steel Wire, failure in hydrogen sulphide, 442; heat-treatment, 101; manufacture and heat-treatment, 101; manufacture and properties, 220

Steelmaking, air requirements, 89; basicity and oxidation theory, 189; duplex processes, 92; economic comparisons of Bessemer with other processes, 40 (*Paper*); metallurgical quality control, 418; practice at Iscor, 418; problems peculiar to western U.S.A., 90; process trends, 93; quality control, 91

Steelworks, boiler plant, 86; at Creusot, 416; dermatitis in, 335; diesel-electric locomotives, 197, 426; diesel locomotive, 197; diesel-mechanical locomotive, 426; economy, 446; extension at Consett, 416; extension at Fontana, 90; at Lorette, 416; materials handling, 198; machinery, 196, 317, 425; melting-shop management, 90; new, in Chile, 188; power trucks, 198; radiant heat, 447

Stewarts and Lloyds, Ltd., Clydesdale Works, 90; crusher for soft ores, 164 (*Paper*); water supply and distribution at Corby, 77

Strain, in bolted joints, 212; determination, 434; hardening mechanism, 212; relationship with stress, 325; relationship with stress in grey iron, 326

Strain Gauges, 326, 434; amplitude-modulation system, 212; in ingot-mould stress determination, 289; in initial-stress determination, 212; low-temperature characteristics, 212; pressure-vessel data, 326

Stress, bend, effect of load alternations, 214; cold-rolling effects, 211; combined, testing, 326; compressive, effect on linear expansion, 329; creep, in austenitic alloys, 329; determination, 434; determination in ingot moulds, 287 (*Paper*); distribution around welded plate, 201; elastic, in curved beams, 212; in gear teeth, 113; in ingot moulds, 261 (*Paper*); initial, determination, 212; internal, measurement, 223; in moulding sand at high temperatures, 313; notch-effective in grey iron, 326; in perforated beam, 434; raisers, 214; reduction in cold-drawn bars, 424; relationship with strain, 325; residual, determination, 212; residual macroscopic, evaluation in cylindrical bars, 15 (*Paper*); residual, in welding, 105; testing in Germany, 209; in welding, inhibition by peening, 105; in welding by intermittent arc, 105; welding, temperature relationships, 105

Stress Analysis, by brittle lacquer, 326, 423, pressure-vessel, 327

Stress Corrosion, 111; of austenitic steel, 334; cracking, 112; effect of thermal treatment, 442; literature survey, 441; photoelastic analysis of Mathaes test-pieces, 434

Stress Relief, stainless steel, 315

Structural Steel, alloy, 331; alloyed, brittleness, 435; brittle-fracture sensitivity, 434; effects of sulphur and phosphorus on weldability, 199; hardenability tests, 327; thermal effects in spot welding, 104; preparation for painting, 173; protection against corrosion, 165 (*Paper*); weldability, 427; welding economies, 427

Structures, elementary theory, 118 (*Book*)

Sulphur, corrosion in CO_2 instruments, 441; determination in coal, 228; determination in steel, 227; determination in high-purity iron, 382; distribution in coking, 86; effect of copper on activity in liquid steel, 417; effect on weldability, 199; removal and recovery from coke-oven gas, 86; type determination in coal, 228

Sulphuric Acid, in rod and wire cleaning, 429

Sulzer Bros., welding quality control, 428

Summers (John) and Sons, Ltd., flying shear, 426; hot-strip mill, 195; slabbing mill at Shotton, 194

Sunbeam Corp., galvanizing water tanks, 205

Supersonic Testing, 217; boiler-plate, 328; bulb welds, 217; developments, 328; gas-turbine discs, 108; techniques, 435, 436

Supersonics, industrial applications, 435

Surface Finishing, designing, 320; developments, 431; by metal spraying, 323; organic etch primers, 206; organic spraying, 432; pre-cleaning, 203; by tumbling, 203; window frames, 323

Surface Hardening, induction, 423; after machining, 99; malleable iron, 99; with welding torches, 104

Surface Preparation, strip before plating, 320

Surface Structure, 222, 438

Surfaces, crystal, deformation by wear, 216; electron-diffraction study, 223; gas decomposition at, 423; imperfection detection instrument, 429; impregnation processes, 423; measurement and definition, 203, 438; roughness determination, 322; steel, quality improvement, 90

Sweden, comparative costs of cupola and high-frequency furnace, 420; drop forging, 193; early ironmaking, 445; foundry industry, 446; history of Värmland ironworks, 445; inductive stirring in arc furnaces, 419; mining and metallurgical industries, 116; scrap position, 116; spectrographic analysis, 443; strip rolling mill, 195; steel exports, 446; steel plan, 446; tool-steel standardization, 108
Switzerland, use of pure oxygen in side-blown converter, 417
Swords and Daggers, history of steels, 445

Tantalum, effect in steel, 330
Tata Iron and Steel Co., duplexing process, 92
Television, iron and steel works applications, 447; stainless steel apparatus for, 221
Tellurium, effect in steel, 330
Temper Brittleness, mechanism, 107; microscopical detection, 223; relationship with hardness, 215; X-ray study, 215
